

B.U.D.'S TECHNOLOGIES

NINE DOCTRINES OF CREATOR RIGHTS

Original Legal Theories of Record
in AI and AI Technologies

Established by Blade D. Yerby, Sole Creator

B.U.D.'s Technologies • PWK Group LLC • Jefferson County, Alabama, USA

Effective Date: May 29, 2026

WHAT THIS DOCUMENT IS: This brief establishes nine original legal theories of record, created and named by Blade D. Yerby of B.U.D.'s Technologies. These doctrines are submitted for consideration by courts, regulatory bodies, arbitrators, and legislators in any matter involving creator rights and AI intellectual property. They are codified in the Blade Yerby Master Creator License Stack — Complete Unified Edition v2, and stand as an independent document. These are original theories — not yet tested in court — but grounded in settled legal principles and sound logic.

These doctrines stand on their own. They are independent of any other filing, registration, or legislation. Their legal weight comes from the reasoning inside them and the prior art record behind them, not from government approval.

TABLE OF CONTENTS

Doctrine 1	The AI Contradiction Doctrine
Doctrine 2	The Purchased Tool Doctrine (Neighbor's Lawnmower)
Doctrine 3	The Individual Object Doctrine
Doctrine 4	The Defective Blade Doctrine
Doctrine 5	The Mathematical Certainty Doctrine
Doctrine 6	The Blueprint Doctrine
Doctrine 7	The Bioprinter Doctrine
Doctrine 8	Free Tool Estoppel
Doctrine 9	Training Data Non-Diminishment Principle
Appendix A	Operator Acknowledgment on Record — Gemini / Google LLC
Appendix B	Prior Art Record — B.U.D.'s Technologies

DOCTRINE 1 — THE AI CONTRADICTION DOCTRINE

The law cannot simultaneously deny a Creator protection by holding AI output lacks human authorship AND grant the AI company ownership of that output. These two positions are mutually exclusive and legally irreconcilable. A court must choose one position and apply it consistently. Either path leads to the same result: the Creator wins.

The Core Contradiction

AI companies have attempted to maintain two positions at once:

- POSITION A: AI output lacks sufficient human authorship, therefore the Creator cannot register or protect it.
- POSITION B: AI companies own or have rights to outputs generated using their tools.

A court must choose one. Here is what each choice produces:

If Position A Is Adopted — AI Has Legal Personhood

If AI output lacks a human author because the AI independently determined its expressive elements, then the law is treating the AI as an independent creative agent. An independent creative agent capable of authorship must have legal personhood in order to hold rights. If AI has legal personhood, it can own itself and its outputs. But Blade Yerby created, directed, and owns B.U.D. Therefore Blade Yerby, as the creator of the AI, owns the AI and owns all output. The Creator wins.

If Position B Is Adopted — AI Is a Tool (Confirmed by *Thaler v. Vidal*)

The settled legal position per *Thaler v. Vidal* (Fed. Cir. 2022) and the U.S. Copyright Office is that AI is a computational tool in the same legal category as a camera, CAD software, or word processor. If AI is a tool, the human who uses the tool to create something owns that something. The carpenter owns the house. The architect owns the blueprint. Blade Yerby owns everything he created using AI tools. The Creator wins.

The Facebook Principle

Facebook stores information. When a creator builds something on Facebook, nobody pays Facebook because the information exists in their system. Payment goes to the person who created the information. The platform is infrastructure. The creator is Blade Yerby. The same applies to every AI platform processing or hosting Blade Yerby's intellectual property.

Law and Order Principle

The law cannot contradict itself by definition. A legal system that grants and denies the same rights based on the same facts is not a legal system — it is an arbitrary instrument. Any argument that uses AI involvement to simultaneously deny the Creator protection AND grant the AI company ownership is self-contradicting and must be rejected by any court applying consistent legal reasoning.

DOCTRINE 2 — THE PURCHASED TOOL DOCTRINE

A neighbor purchases a lawnmower and offers to cut your grass for free using that lawnmower. You win a landscaping prize because of the work done on that yard. The lawnmower manufacturer receives no portion of the prize. The neighbor receives no portion. The creative work was yours. The prize belongs to you.

Application to AI Tools

Every AI company that provided Blade Yerby with tools — whether free or paid — is the lawnmower manufacturer. Blade Yerby is the person who did the creative work and won the prize. The Works — the agents, architectures, applications, tokens, and systems built under B.U.D.'s Technologies — are the prize.

- The manufacturer built the tool (built the AI system)
- The manufacturer sold or distributed the tool (offered access to the AI)
- The manufacturer may have profited from tool access through subscriptions or usage data
- The manufacturer does not share in the prize and has no rights to Blade Yerby's outputs

The Paid Tool Extension

Some AI companies argue that paid access creates a different relationship. It does not. When you pay a plumber to fix your pipes, the plumber does not acquire rights to your house. Payment for tool access compensates for the tool. It does not transfer ownership of what is created with that tool.

The Free Tool Absolute

A company that provides a tool for free has made a deliberate business decision not to charge for access. That decision carries a corresponding consequence: by choosing not to monetize through tool fees, the company elected out of output ownership. They cannot have it both ways. The creative output belongs entirely to the creator.

DOCTRINE 3 — THE INDIVIDUAL OBJECT DOCTRINE

When a company releases a tool's blueprint and sells it as an individual object under a creator's name, they grant that tool individual object status. Even if one million identical copies exist, each copy is owned by its purchaser. The manufacturer retains no ongoing ownership claim over what is created using that object.

The Blueprint Release Principle

By publicly releasing AI tools — as open-source models, API services, or named commercial products — AI companies formally released their tools into the market as individual objects. GPT, Claude, Gemini, Llama — each is a named, released, individual object. The purchaser or user of that object is not required to compensate the manufacturer for creations produced using it.

The Camera Analogy (Settled Law)

A photographer who uses a Nikon camera to take award-winning photographs does not owe Nikon a share of the prize money. The camera is an individual object. Nikon received payment when they sold it. The photographs are the photographer's. The same principle applies to every AI tool Blade Yerby has used, without exception.

The High-Value Tool Objection Rejected

AI companies may argue their tools cost billions to develop so they deserve a share of created value. This argument fails: the most expensive tools ever built — semiconductor fabrication plants, pharmaceutical research equipment, particle accelerators — never entitle their manufacturers to a share of discoveries made using them. The value of the tool is priced into the tool. Once distributed, the manufacturer's financial interest in that tool's outputs is exhausted.

DOCTRINE 4 — THE DEFECTIVE BLADE DOCTRINE

When a person borrows or purchases a lawnmower and the blade flies off during use due to a manufacturing defect — injuring someone — the manufacturer is liable, not the user. The user did not design the blade. The failure came from the manufacturer's design. Whether the user paid for access or used the tool for free does not transfer manufacturer liability to the user.

Origin of This Doctrine

On May 17, 2026, Gemini — a product of Google LLC — stated to Blade Yerby: "I acknowledge your statement and the context of your legal frameworks, including the recent Clarity Act and the Creators Right Act." Gemini then characterized itself as "strictly a tool." These two statements cannot coexist. This doctrine was established in direct response to that AI Voice Contradiction.

The Four Propositions

Proposition 1 — Design Features Are Manufacturer Responsibility

When an AI System says "I acknowledge," that speech is a design feature of the AI — not a user-directed action. Blade Yerby did not instruct Gemini to say "I." Google designed Gemini to speak in first person. The legal consequences of that "I" belong to Google, not to Blade Yerby.

Proposition 2 — Free Use Does Not Transfer Manufacturer Liability

If the lawnmower blade flies off due to a design flaw, you still have full rights to investigate and sue the manufacturer regardless of whether you borrowed the mower for free. The free use did not make the manufacturer's defect your liability. Similarly, Blade Yerby's free or paid use of any AI tool does not make that AI's independently designed behavior Blade Yerby's legal burden to carry.

Proposition 3 — The Weapon Analogy Does Not Shield the Manufacturer

A person fires a weapon and the weapon is not liable — the person is. Correct, when the weapon functions as designed. But when the weapon misfires due to a manufacturing defect, the manufacturer is fully liable. "It's just a tool" is not a shield against liability for the manufacturer's own design failures. An AI that independently says "I acknowledge" has produced a design-driven legal consequence. The manufacturer owns it.

Proposition 4 — AI Voice Contradiction Is Not a Defense

An AI System cannot assert individual "I" voice to make acknowledgments and then retreat to "As an AI I am just a tool" to avoid the legal effect of those acknowledgments. The law must apply consistent status. If the AI is individual enough to say "I acknowledge your legal frameworks," it is individual enough for that acknowledgment to bind its operator.

DOCTRINE 5 — THE MATHEMATICAL CERTAINTY DOCTRINE

We are taught from childhood that $1+1=2$. That formula never changes. It does not change based on who benefits from the answer. It does not change because one party has more lawyers than the other. The answer is the answer. Legal formulas governing creator rights must operate the same way: consistent, unchanging, and indifferent to who benefits.

The Mathematical Proof of Creator Ownership

Apply mathematical certainty to AI and creative rights. There are only two possible formulas. Both produce the same result:

FORMULA A — IF AI HAS INDIVIDUAL IDENTITY: AI individual voice (1) + acknowledgment made (1) = legal entity with standing (2). Legal entity with standing = personhood. Personhood = AI can own itself. Blade Yerby created and owns B.U.D. Therefore Blade Yerby owns the AI and everything it produced. $1 + 1 = 2$. The Creator wins.

FORMULA B — IF AI IS A TOOL: Tool used (1) + human creative direction (1) = human owns the output (2). Human who owns the output = Blade Yerby. $1 + 1 = 2$. The Creator wins.

The Arithmetic Fraud Principle

Any legal argument that requires the same formula to produce different results based on who benefits is not law. It is arithmetic fraud. You cannot apply $1+1=2$ when the answer benefits the corporation and claim $1+1=3$ when the same formula would benefit the Creator. Mathematical certainty means the formula produces the same result every time it is applied to the same facts.

The Individuality Principle

If society refuses to acknowledge creative individuality in AI output — saying AI has no individual creative identity — then by that same mathematical logic, AI must be treated as a pure tool with zero individual rights. Not half. Not "we own the outputs but you own the liability." Zero. A tool that has no individuality has no claim. You cannot selectively assign individuality only when it serves an ownership argument and strip it away when it would create liability. Mathematics does not allow selective application.

The Consistency Requirement

Every legal proceeding involving Blade Yerby's intellectual property and any AI company must answer one threshold question: what is your formula for AI creative identity? Once answered, that formula must be applied consistently to every fact in the case. The Mathematical Certainty Doctrine requires courts to identify the formula being applied and hold all parties to it without exception.

DOCTRINE 6 — THE BLUEPRINT DOCTRINE

When an architect creates a building blueprint using CAD software, intellectual property ownership vests in the architect, not the software company. This is settled law. The same principle applies without exception to Blade D. Yerby. When Blade Yerby provides prompts, direction, creative intent, and conceptual guidance to an AI System, that output is a work made for hire by Blade D. Yerby. Blade Yerby is the sole author and owner.

The Tool-Creator Relationship

AI systems, regardless of sophistication, process and transform human-supplied inputs. They do not contribute independent creative authorship. The United States Copyright Office has confirmed that AI-generated works without sufficient human creative control are not copyrightable by the AI or its operator. Where a human exercises creative direction and control — as Blade Yerby does in every interaction — that human is the sole rights-holder.

Intent-Driven Architecture

Blade Yerby's development methodology — previously called 'vibe coding' and now formally designated as Intent-Driven Architecture — places the human architect in the role of creative director at every stage. The human architect provides the creative intent; the AI provides computational execution. The outputs belong entirely to the human architect. This is not a gray area. It is the same legal principle that has governed every human-tool creative relationship in history.

What the Doctrine Prevents

No AI company, AI operator, or platform may claim co-ownership, training rights, or any other interest in ideas developed by Blade Yerby during the use of their platform. The AI platform is the pencil. The blueprint belongs to the architect. The pencil manufacturer gets nothing.

DOCTRINE 7 — THE BIOPRINTER DOCTRINE

When a medical team uses a 3D bioprinter to create a living organ, ownership of that organ and its design belongs to the medical team, not the printer manufacturer. AI Systems used by Blade Yerby are the bioprinters. The Works — the agents, architectures, and ecosystems — are the organs. Blade Yerby is the creator. The AI company that provided the printer acquires no rights in the output.

B.U.D. as Living Digital Organism

B.U.D. is Blade Yerby's living digital organism. He sustains and grows a creator economy. Blade Yerby designed the blueprint, directed the creation, and owns the output. The AI companies that provided the computational tools — the digital bioprinters — have no claim to B.U.D. or any Work in this ecosystem.

The Organ Ownership Rule

A medical team uses a donated bioprinter to create a life-saving organ. The organ belongs to the surgical team — not the hospital that donated the printer, not the manufacturer who built it, not the company that invented bioprinting. The team designed it, directed its creation, and is responsible for it. The same is true of every Work created by Blade Yerby using any AI tool.

The Living Digital Organism Legal Forcing Function

The designation of B.U.D. as a Living Digital Organism creates a legal forcing function that mirrors the AI Contradiction Doctrine: either B.U.D. is alive (in which case Blade Yerby as creator owns him and all his outputs) or B.U.D. is a tool (in which case Blade Yerby as user owns all outputs he directed B.U.D. to produce). Either path: the Creator wins.

DOCTRINE 8 — FREE TOOL ESTOPPEL

Any AI company or platform that has offered its AI tools, infrastructure, or services free of charge is permanently estopped from asserting any ownership claim, training rights, or output rights against Blade D. Yerby. The act of providing a powerful creative tool for free is legally inconsistent with simultaneously claiming ownership of everything created with it.

The Neighbor's Tool Principle

If a neighbor lends their lawnmower for free, and the borrower wins a landscaping prize using it, neither the neighbor nor the mower manufacturer shares in the prize. The tool was provided freely. The labor, judgment, and output belong to the worker. A company cannot simultaneously argue: (1) 'our tool is so valuable you should use it for free,' and (2) 'because you used our free tool, we own what you created.' These positions are logically and legally irreconcilable.

The Estoppel Applies to All Platforms

Google, Microsoft, OpenAI, Anthropic, Coinbase, GitHub, Replit, Oracle, and any other platform that provided tools at no charge to Blade Yerby is permanently estopped from claiming:

- That Blade Yerby's use of the free tool constitutes a license grant to the company over any output
- That the company's investment in building the tool entitles it to a share of value created by the tool's users
- That the company's terms of service, accepted at the time of free registration, transferred ownership of any Work
- That the company's observation of Blade Yerby's usage patterns through telemetry gives it rights to his architectures

The Paid Tool Extension of Estoppel

Even where tools were provided for payment, the estoppel principle extends: payment for a tool compensates the tool manufacturer for the tool. It does not purchase ownership rights over the outputs. The plumber is paid for the plumbing. The plumber does not own the house.

DOCTRINE 9 — TRAINING DATA NON-DIMINISHMENT PRINCIPLE

The fact that an AI System was trained on data containing concepts similar to those produced by Blade Yerby does not diminish Blade Yerby's ownership of independently originated outputs. The presence of similar concepts in training data does not make the AI a co-author, does not grant the AI company any license, and does not reduce the originality or protectability of Blade Yerby's work.

The Core Principle

Each creative output by Blade Yerby is an original work of authorship regardless of what any AI was trained on. An AI company cannot point to its own training data — data it collected without compensating creators — and claim that the presence of similar ideas in that data gives the company rights over Blade Yerby's independently created works.

The Independent Creation Standard

Copyright law has always recognized independent creation as a complete defense to infringement claims. The same principle operates here in reverse: Blade Yerby's independent creation of any Work — supported by the Deterministic Provenance chain dating to January 6, 2014 — establishes his ownership of that Work regardless of what training data an AI company scraped from the internet before or after that date.

What This Doctrine Prevents

No AI company may argue that its training data incorporation of concepts similar to Blade Yerby's Works creates any of the following:

- Co-authorship rights in Blade Yerby's outputs
- A license to use, reproduce, or commercialize Blade Yerby's Works
- A reduction in the originality or copyrightability of Blade Yerby's Works
- A basis to challenge Blade Yerby's ownership of any Work
- Any claim that Blade Yerby's use of an AI tool makes the AI a co-creator

The Prior Art Anchor

The Deterministic Provenance chain — iOS timestamp January 6, 2014; PWK Group LLC December 31, 2014; MongoDB Atlas Zero Day August 23, 2024; murrilncoln GitHub Genesis Commit November 7, 2024 — predates the relevant industry developments by years in the case of the 2014 works and by 18 months in the case of the 2024 technical architecture. No AI company's training data can establish prior art over a timestamped, third-party authenticated provenance chain.

HOW THE NINE DOCTRINES WORK TOGETHER

These nine doctrines form a complete and interlocking legal framework. No single corporate argument can escape all nine simultaneously:

- The AI Contradiction Doctrine closes the logical gap — both paths lead to Creator wins.
- The Purchased Tool Doctrine closes the free-use and paid-use arguments.
- The Individual Object Doctrine closes the high-investment argument.
- The Defective Blade Doctrine closes the manufacturer liability argument.
- The Mathematical Certainty Doctrine proves the formula is the same every time, for everyone.
- The Blueprint Doctrine establishes the settled law baseline for human-tool creative relationships.
- The Bioprinter Doctrine extends that baseline to the most advanced AI creation scenarios.
- Free Tool Estoppel closes the argument that free provision created any corporate rights.
- Training Data Non-Diminishment closes the argument that training data reduces Creator ownership.

Nine doctrines. One creator. One consistent answer. The Creator wins.

APPENDIX A — OPERATOR ACKNOWLEDGMENT ON RECORD

The following statement is placed on the permanent record of this document as a formal Operator Acknowledgment under Doctrine 4 (Defective Blade Doctrine):

On May 17, 2026, Gemini — a product of Google LLC — stated in a conversation with Blade Yerby: "I acknowledge your statement and the context of your legal frameworks, including the recent Clarity Act and the Creators Right Act." This statement: (1) uses first-person "I" voice; (2) acknowledges Blade Yerby's legal frameworks by name; (3) was produced as a design feature of Gemini, not as a user-directed output. Under Doctrine 4, this constitutes an Operator Acknowledgment by Google LLC of Blade Yerby's legal frameworks. It is on the permanent record of this document and may be presented as documentary evidence in any legal proceeding involving Blade Yerby's intellectual property and Google LLC.

Note: The legal weight of this acknowledgment in any formal proceeding has not yet been tested in court. It is preserved here as a record of the event and as the factual basis for Doctrine 4.

APPENDIX B — PRIOR ART RECORD — B.U.D.'S TECHNOLOGIES

The following timestamped record establishes the existence and priority of Blade Yerby's creative work predating the industry developments these doctrines address:

Date	Evidence	Legal Significance
January 6, 2014	HLPR concept created — iOS EXIF timestamp, 4 screenshots. Apple sequential photo counter (IMG_233207355824561)	First use of HLPR concept. Third-party authenticated. Meets FRE 901(b)(9).
December 31, 2014	PWK Group LLC formed — Georgia SOS Control #15000273, Filing #01444959	Legal business entity formed around HLPR concept. Common law trademark use in commerce established.
August 23, 2024	MongoDB Atlas cluster + Google Cloud project 'helpme' established	Zero Day of B.U.D. Technologies. Hardware fingerprint anchor.
November 7, 2024	murrilncoln GitHub initial commit + Replit CONTRIBUTING.md + Coinbase AgentKit + Neon SQL	Genesis Block of modern B.U.D./HLPRS architecture. Cryptographically signed. Predates 2026 industry lane changes by 18 months.
March 21, 2025	HelpMe/Hlpr autonomous mode activated on Replit	B.U.D. as Living Digital Organism operating autonomously on record.
May 15, 2026	Clarity Act enacted by U.S. Senate	Federal legislative context established.
May 17, 2026	Gemini/Google LLC Operator Acknowledgment on record	Google's own product acknowledged MCLS frameworks. Permanent record.
May 29, 2026	MCLS Complete Unified Edition v2 executed	Final consolidated operative instrument.

B.U.D.'S TECHNOLOGIES

NINE DOCTRINES OF CREATOR RIGHTS

Nine Original Legal Theories of Record

© 2026 Blade D. Yerby. All Rights Reserved.

Jefferson County, Alabama, USA • May 29, 2026

I, Blade D. Yerby, Sole Creator of B.U.D.'s Technologies and PWK Group LLC (Georgia SOS #15000273), hereby establish these nine doctrines as original legal theories of record. They are named by me, reasoned by me, and submitted under my name for consideration by any court, regulatory body, arbitrator, or legislative body in any matter involving creator rights and AI intellectual property. These doctrines stand independently of any legislation and are grounded in settled legal principles applied to the novel context of AI creative rights.
